

1. Project Scope & Integration

- Should this be available for all projects or only new projects going forward?
- Will existing projects need to be migrated with credits, or start fresh?
- Should the credit system be optional (toggled per project) or mandatory for all?

2. Payment & Financial Integration

- How will payment verification work?
 - Do you have an existing payment gateway we'll integrate with?
 - Or should we accept manual payment confirmation by admin?
- What happens if a client disputes a payment after credits are released?

3. User Roles

- Who exactly are the "Designers" and "Business Managers" in your current setup?
 - Are these existing user roles we should extend?
 - Or do we need to create a new role hierarchy?
- Can one person have multiple roles (e.g., Manager + Admin)?

4. Milestone Workflow

- Who initiates marking a milestone as "Complete" - the Designer or the Manager?
- Is there an approval flow (Designer submits → Manager approves)?
- What's the current milestone tracking process - is it in spreadsheets, another tool, or doesn't exist yet?

5. Revisions

- How do you currently track revisions per room?
- Should the system auto-detect a revision (e.g., when design is modified after sharing), or require manual logging?
- What constitutes a "design option shared" - is there a formal handoff?

6. Client Visibility

- What should clients see?
 - Just their credit balance?
 - Full transaction history?
 - Milestone progress?
- Should clients receive notifications (email/SMS) for low credits or milestones?

7. Reporting

- Who needs access to reports - just Admins, or Managers too?
- Do you need real-time dashboards or periodic exports (weekly/monthly)?
- Any specific report formats already in use we should match?

8. Edge Cases

- What happens if a project is cancelled mid-way - are credits refundable?
- Can credits ever be transferred between projects (e.g., same client, different property)?

- What's the escalation path if a client disputes credit consumption?
