

Pricing Version – Software Correction / Enhancement Requirement

Please check and correct the following issues:

Currently, **Version 2 is live in the software**, but I have not yet completed and imported the full Version 2 pricing. Therefore, I need **Version 1 is live and Version 2 should not be live** until Version 2 is fully completed and finalized.

Please refer to the attached screenshots for clarification:

- **Screenshot “A” – Version 1 (V1):** The newly added **Plumbing – Avinesh** line item is not showing.
- **Screenshot “B” – Version 2 (V2):** The newly added **Plumbing – Avinesh** line item is showing correctly.

Required Correction:

Currently, **Version 1 (V1) should remain the only LIVE and ACTIVE version** in the software, as all our current projects, quotations, pricing, and line-item activities are being managed under V1. **Version 2 (V2) should not be LIVE at this stage**; you can keep V2 ready in the backend as a draft/preparation version where we can add and update all new rates, pricing, and line items, but these V2 changes should not affect the current live V1 system or projects. If we add or edit any pricing or line item for an existing project, the software should continue to update **V1 only**. V2 should become active/live **only when we specifically approve and publish V2**. Until then, the software should operate completely based on V1, while V2 remains available only for preparing the future pricing revision.
